FLIES SPREADING FEVER SAYS AMARILLO PHYSICIAN

Dr. H. L. McMeans declares that the people of Amarillo should take the advice of the state, county and city health departments and make a crusade against flies. This gentleman, with other authorities, states that flies are one of the most deadly enemies in this section for the spreading of typhoid germs. Already there has been a slight showing of fever in this city, and this physician, with other states, that if the flies were eliminated the disease would be far easier to handle.

Other Panhandle cities and communities have waged war upon the flies to such extent that they were practically exterminated, and it is hoped that Amarillo will awaken to the importance of this work against the pests.

Edmonton, Alta., June 28.—On the shores of the Lesser Slave Lake, lying in the heart of Alberta about 200 miles northwest of this city, a celebration of an unique character is scheduled to be held during the two days beginning tomorrow. The celebration is to be held in observance of the fiftieth anniversary of the settlement of the town of Grondard and in honor of its founder—Bishop Grondard, the famous Catholic prelate and missionary who spent fifty years in the far north country and who has administered to the material as well as the spiritual needs of the natives and pioneers of that region by building schools and hospitals and doing wonders in the encouragement of agriculture and industry. Several bishops and numerous clergymen of the Catholic church in western Canada are to take part in the celebration, which will include historical exercises and the presentation of a pageant depicting incidents in the career of Bishop Grondard and the development of the Lesser Slave Lake country.

VEGA WHEAT WILL YIELD AVERAGE OF 15 BUSHELS.

Among the visitors in Amarillo yesterday was Hugh Fisher of Vega, who, when asked about crop conditions in his section of the country, said: "Wheat is being harvested around Vega at present, and some of it will run as high as 25 bushels per acre. I believe that the average yield of that entire section will run as high as 15 bushels per acre, according to investigations throughout our section."

We expect that on account of the increased acreage the tonnage in removing the wheat crop will far surpass anything ever shown in this section of the country. The harvesting will be pushed with the least possible loss of time, and finished perhaps as early as ever before on account of increased facilities.
